The most comprehensive source for downloading and managing skills for the Antigravity IDE is the **Antigravity Awesome Skills** ecosystem. You can access these resources through the following main hubs:

Primary Repository and Collections

- **Antigravity Awesome Skills (Library of 700+ Skills):** This is the largest community-driven repository. It includes automated installers and a full catalog of specialized roles.
    - **GitHub Link:** https://github.com/sickn33/antigravity-awesome-skills
    - **Skill Catalog:** Browse the CATALOG.md file in this repo for the full list of individual skills to copy and paste.
- **Awesome Antigravity (Prompts & Templates):** A collection focused on "Mission Control" templates and agent personas.
    - **GitHub Link:** https://github.com/ZhangYu-zjut/awesome-Antigravity
    - **Directory Website:** https://awesome-antigravity.com (Offers search, filter, and one-click copy features).

Specialized Packs (Ready to Use)

The community organizes these skills into "Bundles" for specific professional roles. You can find these within the docs/BUNDLES.md file of the **sickn33** repository:

- **Marketing & Sales:**
    - **Marketing & Growth Pack:** Includes content-creator, seo-audit, ab-test-setup, and email-sequence.
    - **Scorecard Marketing:** A specialized system for generating leads via interactive assessments.
    - **Billing Automation:** Covers SaaS subscriptions, invoice generation, and tax compliance.
- **Accounting & Business Analysis:**
    - **Business Analyst Pack:** Includes startup-metrics-framework, market-sizing-analysis (TAM/SAM/SOM), and kpi-dashboard-design.
    - **Startup Financial Modeling:** Focused on 3-5 year projections and error-free revenue forecasting.
- **Coding & Engineering:**
    - **Web Wizard Pack:** Performance patterns for React, Next.js, and Tailwind v4.
    - **Senior Engineering:** Tools for Test-Driven Development (TDD), architecture design, and systematic debugging.

How to Install or Copy

1. **Automated Install:** Run npx antigravity-awesome-skills in your terminal to clone the entire library to your global skills folder (~/.gemini/antigravity/skills/).
2. **Manual Copy-Paste:** Create a folder for the skill in your project at .agent/skills/<skill-name>/, then create a file named SKILL.md inside it and paste the Markdown content from the catalog.
3. **One-Click Copy:** Use the awesome-antigravity.com website to instantly get the JSON or Markdown for specific prompts.

For downloading and copying specialized skills and personas for the Google Antigravity IDE, you can use these primary repositories and direct skill links. These resources provide the standard SKILL.md files that act as "employee handbooks" for your agents.

Top Skill Hubs and Repositories

- **Antigravity Awesome Skills (700+ Skills):** The most extensive collection covering every category from coding to marketing.
  - **Repository:** https://github.com/sickn33/antigravity-awesome-skills
  - **Full Catalog (Raw Text):**
    https://github.com/sickn33/antigravity-awesome-skills/blob/main/CATALOG.md
- **Awesome Antigravity (Personas & Missions):** Best for "The Ruthless Reviewer" and complex build templates.
  - **Repository:** https://github.com/ZhangYu-zjut/awesome-Antigravity
  - **Directory Web:** https://awesome-antigravity.com
- **Antigravity Skill Vault (300+ Ports):** A collection of professional workflows ported from other major agent platforms.
  - **Repository:** https://github.com/rmyndharis/antigravity-skills

Ready-to-Use Copy & Paste Instructions

To manually add these to your IDE without using a terminal installer, follow this structure:

1. **Create the Folder:** In your project root, create a folder at .agent/skills/your-skill-name/.
2. **Create SKILL.md:** Create a file named SKILL.md inside that folder.
3. **Paste the Content:** Use this standard template if you are writing your own or modifying a downloaded one:

---

name: skill-identifier description: A third-person explanation of when the agent should trigger this (e.g., "Use when the user asks to analyze competitors or market trends").

Skill Name

Goals

- Clear statement of what this skill achieves.

Instructions

1. Step-by-step logic for the AI to follow.
2. Specific patterns or frameworks to use (e.g., TAM/SAM/SOM for analysis).

Constraints

- "Do Not" rules (e.g., "Never modify the production database directly").

Checklist

- [ ] List of validation steps the agent must perform before finishing.

Once saved, Antigravity will automatically discover the skill based on your natural language requests that match the description field in the metadata.
